Running Title: Acanthocephalans of Arkansas

Abstract

Little is known about the spiny- or thorny-headed worms (Phylum Acanthocephala) of Arkansas and there are no summaries on the acanthocephalans of the state. Here, we provide a checklist of the 22 acanthocephalans that occur in Arkansas’ vertebrates based on previously published records and new data presented herein. In addition, we document a new state record as well as 13 new host records for some fish acanthocephalans.

Introduction

The phylum Acanthocephala includes at least 4 classes, 10 orders, 26 families, and about 1,300 species (Amin 2013). Adults are highly specialized, dioecious parasites of the intestinal tract of a variety of vertebrates. As adults acanthocephalans reside exclusively in the vertebrate small intestine. They have an indirect life cycle involving at least 2 hosts, either an aquatic intermediate host (Amphipoda, Copepoda, Isopoda, and Ostracoda) or terrestrial intermediate host, including insects, crustaceans and myriapods. Fishes, amphibians, reptiles, birds, and mammals serve as definitive hosts.

The purpose of this report is 2-fold: (1) provide a checklist of the acanthocephalans that occur in Arkansas based on previously published records, and (2) document new host and distributional records of some acanthocephalans from fishes.

Methods

Between April 2014 and July 2015, we collected fishes with backpack electrofishers, dipnets and seines. Fish were placed in habitat water and necropsied within 24 hr. We followed accepted guidelines for the use of fish in research (AFS 2004). Specimens were overdosed with a concentrated Chloretone (chlorobutanol) solution and measured for total length (TL). A mid–ventral incision from anus up to the level of the stomach was made to expose the gastrointestinal tract and other internal viscera (including gallbladder) which was removed and placed in a Petri dish containing 0.6% w/v saline. Acanthocephalans were transferred to Petri dishes containing distilled water overnight to completely evert their proboscides. They were then placed in 70–95% v/v DNA-grade ethanol, stained with acetocarmine and mounted entire with Canada balsam or Damar gum. Voucher specimens were deposited in the Harold W. Manter Laboratory of Parasitology Parasite Collection (HWML), Division of Parasitology, University of Nebraska-Lincoln, State Museum. Host voucher specimens were deposited in the Henderson State University Museum (HSU), Arkadelphia, Arkansas. Prevalence, mean intensity, and range of infection are provided in accordance with terminology given in Bush et al. (1997).

We also examined the scientific literature for previous information on reports of acanthocephalans from Arkansas. Reports of unidentified acanthocephalan cystacanths from various Arkansas vertebrate hosts, were not included herein. We follow Amin’s (2013) classification of the Acanthocephala.

The annotated list of data for fish hosts harboring acanthocephalans is as follows: host and TL (mean ± 1SD range, when available), prevalence, intensity (mean ± 1SD range, when available), collection site, collection date, HWML accession number.

Results and Discussion

The following species of acanthocephalans have
been previously reported from vertebrate hosts in Arkansas:

**ACANTHOCEPHALA OF ACTINOPTERYGII**

**Eoacanthocephala:**

**Neoichnorhynchidae**

*Neoichnorhynchus* sp. – *Aphredoderus sayanus*, Pirate Perch (McAllister et al. 2014a); *Moxostoma duquesnei*, Black Redhorse (McAllister et al. 2015a).

*Paulisentis* sp. – *Campostoma anomalum*, Central Stoneroller (McAllister et al. 2015a).

**Paleoacanthocephala:**

**Echinorhynchidae**

**Heteroacanthocephalidae**

*Aspersentis* sp. – *A. sayanus* (McAllister and Amin 2008).

**Pomphorhynchidae**

**Illiosentidae**

*Leptorhynchoides* sp. – *A. sayanus* (McAllister et al. 2014a).

*Leptorhynchoides thecatus* (Linton, 1891) Kostylev, 1924 – *M. salmoides* (Becker et al. 1966, Becker and Houghton 1969, Becker and Cloutman 1975). Note: Classification of this common parasite was recently revised by Steinauer and Nickol (2015); previous records from fishes need to be re-examined.

**ACANTHOCEPHALANS OF AMPHIBIA**

**Fessisentidae**

**ACANTHOCEPHALANS OF REPTILIA**

**Neoichnorhynchidae**

**Pomphorhynchidae**

*Pomphorhynchus bulbicolli* Linkins in Van Cleave, 1919 – *Nerodia sipedon pleuralis*, Midland water snake (McAllister et al. 2015b). The presence of *P. bulbocolli* in this snake is considered to be an artifact of a piscivorous diet and the host should be considered accidental.

**ACANTHOCEPHALA OF AVES**

**Paleoacanthocephala:**

**Polymorphida:**

**Centrorhynchidae**

*Centrorhynchus conspectus* Van Cleave and Pratt, 1940 – *Bubo virginianus*, great horned owl (Richardson and Nickol 1995).

**ACANTHOCEPHALA OF MAMMALIA**

**Archiacanthocephala:**

**Moniliformida:**

Oligachanthorhynchida: Oligachanthorhynchidae

Palaeacanthocephala: Polymorphida: Centrorhynchidae

Centrorhynchus conspectus Van Cleave and Pratt, 1940. – D. virginiana (Richardson 1993); P. lotor (Richardson et al. 1992).

Plagiorhynchidae

Plagiorhynchus cylindraceus (Goeze, 1782) Schmidt and Kuntz, 1966. – D. virginiana (Ellis et al. 1999).

NEW HOST AND GEOGRAPHIC RECORDS FOR ACANTHOCEPHALANS FROM ACTINOPTERYGII

Counties where acanthocephalans were collected from fishes are presented in Fig. 1. All hosts were taken from the Arkansas, Ouachita and White river drainages. Our findings are documented as new host records for each acanthocephalan listed below.

Pomphyrhynchus bulbocolli Linkins in Van Cleave, 1919

Campostoma spadiceum, 1 male, 1 female, Garland Co., Walnut Creek (34.533874°N, 93.71049°W), 8 Jun. 2015. HWML 101937.

Lumia philbyi, 110 mm TL, 3 specimens, Izard Co., Calico Creek (36.122557°N, 92.143797°W), 7 Jul. 2015. HWML 101941.

Although this acanthocephalan is widely-distributed in North American freshwater fishes (Amin 1987, Hoffman 1999), this is the first report of P. bulbocolli from Arkansas fishes.

Neoechinorhynchus prolixus Van Cleave and Timmons, 1952

Carpiodes cyprinus, Marion Co., Crooked Creek (36.244433°N, 92.716531°W), 23 Jul. 2014, HWML 75374. McAllister et al. (2015a) previously reported N. prolixus from C. velifer from Arkansas.

Acanthocephalus dirus (Van Cleave, 1931) Van Cleave and Townsend, 1936

Etheostoma artesiae, 5 gravid females. Clark Co., Mill Creek off St. Hwy 7 (34.033599°N, 92.935703°W), 9 Apr. 2015. HWML 101943.

Etheostoma whipplei, 74 mm TL, 2 females, 1 juvenile, Johnson Co., Washita Creek (35.654197°N, 93.593527°W), 7 Jun. 2015. HWML 101938.

Lepomis cyanellus, 1 male, 2 gravid females, White Co., Gin Creek in Searcy (35.2511°N, 91.716288°W), 4 Apr. 2014. HWML 101947.

Luxilus zonatus, 1 female, Sharp Co., N Big Creek at St. Hwy 354 (36.157657°N, 91.5141°W), 8 Jul. 2015. HWML 101981. This is the first report of any helminth from this host.

Acanthocephalus dirus has the widest geographical and host distribution and is found in at least 16 families of fish mostly in the Mississippi River drainage in 13 states in the USA (Amin 1985). We document 4 new host records and document A. dirus for the first time from Arkansas.

Acanthocephalus tahlequahensis Oetinger and Buckner, 1976

Etheostoma radiosum, 2 males, Garland Co., Walnut Creek (34.533874°N, 93.371049°W), 26 Nov. 2014, HWML 101949; 1 male, 2 males, Garland Co., Bear Creek at Bear (34.534784°N, 93.285969°W), 2 specimens, 63 mm TL, 26 Nov. 2014, 22 May 2015. HWML 101934, 101950; Polk Co., Carter Creek (34.543342°N, 94.165758°W), 22 May 2015, HWML 101935; 1 female, Garland Co., Middle Branch Gulpha Creek (34.510095°N, 93.008682°W), 8 Jun. 2015. Not

Figure 1. Nine Arkansas counties containing streams where fishes harbored acanthocephalans. Abbreviations: C (Clark), G (Garland), IN (Independence), IZ (Izard), J (Johnson), Marion (M), P (Polk), S (Sharp), W (White).
C.T. McAllister, D.J. Richardson, M.A. Barger, T.J. Fayton and H.W. Robison

...deposited.

*Lepomis cyanellus*, 1 male, Polk Co., Carter Creek (34.543342°N, 94.165758°W), 22 May 2015. HWML 101936.

McAllister et al. (2014d) previously reported *A. tahlequahensis* in Arkansas from *C. carolinae*. This species was described from adjacent Oklahoma in the Illinois River drainage and reported from Sunburst Darter (*Etheostoma mihileze*), Orangethroat Darter (*E. spectabile*), Redspot Chub (*Nocomis asper*), and Cardinal Shiner (*Notropis cardinalis*) (Oetinger and Buckner 1976). McAllister et al. (2015a) extended the host range in fishes of the Centrarchidae and Ictaluridae and here we add 2 new hosts and a new river drainage (Ouachita).

**Neoechinorhynchus sp.**

*Etheostoma spectabile*, 1 male, White Co., Dennard Creek (35.257397°N, 91.74433°W), 4 Apr. 2015. HWML 101948.

*Hypentelium nigricans*, 159 mm TL, 1 juvenile, Marion Co., Crooked Creek (36.244243°N, 92.716531°W), 23 Jul. 2014. Not deposited.

Since a male and 3 juveniles were found in these 4 hosts, no specific identification was possible; however, we document 4 new host records for the genus.

In summary, we provide a checklist of the 22 acanthocephalans now known from Arkansas as well providing 13 new host records and a new state record (*A. dirus*) for fish acanthocephalans. Additional surveys, particularly of birds along the eastern corridor and southern tier of counties, and of fishes from other Arkansas river drainages, will undoubtedly increase our knowledge of these parasites.

**Acknowledgments**

The Arkansas Game and Fish Commission issued Scientific Collecting Permits to CTM and HWR. We thank S.L. Gardner (HWML) and R. Tumlison (HSU) for expert curatorial assistance, D. Neely (Tennessee Aquarium, Chattanooga, TN) and U. Thomas (Chicago, IL) for assistance with collecting on the White River in 2014, and S.E. Trauth (Arkansas State University) and R. Tumlison for collecting assistance in Clark County in 2015. This material is based upon work supported by the National Science Foundation under Grant Number DEB 1253129 to MAB.
