30 Years of Deadly Hate and Bias Crimes

**Findings from the Bias Homicide Database (BHDB)**

In comparison to other types of bias homicide:

- **anti-race/ethnicity/nationality homicides** more often involve multiple White offenders who are affiliated with the extreme far-right movement.

- **anti-homeless homicides** more often involve young male offenders who target older White males, usually previously unknown to them, in order to rob and kill them in public settings.

- **anti-sexual orientation or gender identity homicides** more often involve non-White offenders, as well as offenders who are unaffiliated with extremist movements and who kill victims previously known to them within residences.

- **anti-religious affiliation homicides** more often involve older offenders who commit homicides alone and who kill multiple victims (e.g., spree killings).

Map Key

Homicide Victims Per 100,000 Residents
The number of victims targeted because of perceived race, ethnicity, or nationality was similar to the number of victims targeted because of their perceived sexual orientation or gender identity.

About the Bias Homicide Database (BHDB)

The Bias Homicide Database (BHDB) is an open-source, relational database housed in the Terrorism Research Center (TRC), which is located in the J.W. Fulbright college of Arts and Sciences at the University of Arkansas. Created in 2003, the TRC harnesses science and data analytics to promote safer communities, inform evidence-based policies, and train the next generation of law enforcement and intelligence professionals. The TRC also hosts the Crime and Security Data Analytics Lab.

Currently, the BHDB includes data on:

- 357 bias homicides in the United States occurring between 1990 and 2019
- 480 bias homicide victims
- 647 bias homicide offenders

BHDB Definitions and Inclusion Criteria

Definition of Bias Homicide: A felonious killing in which evidence exists in open-sources that victims were targeted in part or wholly based on one or more real or perceived status or identity characteristics.

Possible Indicators of Discriminatory Selection of Victims

1) Discriminatory language used  
2) Symbolic location of homicide  
3) Official hate crime charge  
4) Police/prosecutor labeling  
5) Offender admission of discriminatory selection  
6) Prior discriminatory violence committed by offender  
7) Mode of victim identification or selection  
8) Symbolic manipulation of victim's body

About This Research Brief

This brief was prepared by Terrorism Research Center (TRC) staff. The TRC is a non-profit, non-partisan research organization.
