# ARKANSAS SOYBEAN PERFORMANCE TESTS<sup>1</sup> 2014

R.D. Bond<sup>2</sup>, D.G. Dombek<sup>3</sup>, and J.A. Still<sup>4</sup>

## INTRODUCTION

Soybean variety and strain performance tests are conducted each year in Arkansas by the University of Arkansas System Division of Agriculture Arkansas Crop Variety Improvement Program. The tests provide information to companies developing varieties and/or marketing seed within the State, and aid the Arkansas Cooperative Extension Service in formulating variety recommendations for soybean producers.

## METHODS

Varieties and strains containing any herbicide tolerance trait(s) were eligible for entry into two types of tests: Early Planted Tests (EPTs) and Full-Season Tests (FSTs). Entries in the FSTs were also tested in a simulated Double-Crop test. To facilitate field operations and to allow for fairer comparisons between varieties and strains in both types of tests, entries were divided into maturity classes based on information provided by the originating company or institution. Entries in the EPTs were divided into four maturity classes. Entries in the FSTs were divided into five maturity classes. Entries in the “Early”, “Mid”, and “Late” Group IV EPTs and FSTs had relative maturities ranging from 4.0 to 4.5, 4.6 to 4.7, and 4.8 to 4.9, respectively. Entries in the Group V EPTs had relative maturities ranging from 5.0 to 5.3. Entries in the “Early” and “Late” MG V FSTs had relative maturities ranging from 5.0 to 5.3 and 5.4 to 5.9, respectively. The 2014 soybean performance tests contained 118 EPT entries and 253 FST entries.

The 2014 soybean FSTs were conducted at the Northeast Research and Extension Center (NEREC) at Keiser, the Lon Mann Cotton Research Station (LMCRS) near Marianna, the Rice Research and Extension Center (RREC) near Stuttgart, the Rohwer Research Station (RRS) near Rohwer and the Vegetable Research Station (VRS) near Kibler. The EPTs were established at the NEREC, the RRS, the

LMCRS, and at the Berger Farm, near Weiner, Ark. A test location map can be found inside the back cover.

Within each test, entries were arranged as a randomized complete block design with three or four replications. Plots in all tests were 4 or 5 rows wide depending on between-row spacing and 20-25 feet in length. Seeds were packaged for recommended planting rates and were planted with a cone planter. Specific location and cultural practice information accompany each table.

All rows of each plot were harvested for yield determination, except in the NEREC Irrigated and Non-Irrigated tests, all RREC tests, and all VRS tests where only the interior rows were harvested. Percent moisture was recorded for all harvested seed and plot weights were adjusted to 13% moisture. Plot weights of all tests were converted to yield in bushels per acre (bu/A).

Plots were visually rated for shattering and lodging. Shattering ratings were carried out on border rows according to the following scale:

- |                   |                          |
|-------------------|--------------------------|
| 1. No shattering  | 4. 9-19% shattered       |
| 2. 1-3% shattered | 5. 20% or more shattered |
| 3. 4-8% shattered |                          |

Lodging ratings were recorded on a scale from 1 to 5 based on the following criteria:

1. Almost all plants erect
2. Either all plants leaning slightly, or a few plants down
3. Either all plants leaning moderately, or 25-50% of the plants down
4. Either all plants leaning considerably, or 50-80% of the plants down
5. All plants down badly

Average plant height was recorded in inches for each plot in the first replication of each test.

### Variety Testing Website

This report and other information about variety testing for corn, cotton, grain sorghum, rice, and small grains can be found at [www.ArkansasVarietyTesting.com](http://www.ArkansasVarietyTesting.com). Disease ratings that do not appear in this or other reports may also be found on this Website.

**Table 9. Yields of Late Maturity Group V, Full-Season, Soybean Varieties and Strains at All Locations, 2014<sup>1,2</sup>, Continued.**

<sup>1</sup>Keiser Irrigated = Northeast Research and Extension Center. Soil series = Sharkey silty clay.

Keiser Nonirrigated = Northeast Research and Extension Center. Soil series = Sharkey silty clay.

Keiser Double-Crop Irrigated = Northeast Research and Extension Center. Soil series = Sharkey silty clay.

Stuttgart Irrigated = Rice Research and Extension Center. Soil series = Crowley silt loam.

Rohwer Irrigated = Rohwer Research Station. Soil series = Desha silt loam.

Kibler Irrigated = Vegetable Research Station. Soil series = Roxanna silt loam.

<sup>2</sup>Yields from the Marianna location were not reported due to low yields and poor uniformity.

<sup>3</sup>Only Maturity Group V varieties and strains tested at the Kibler location. Tests were planted at this location on May 29 and replanted on June 25. Immediately following the first planting date the area received heavy rainfall resulting in inadequate stands.

<sup>4</sup>Average yields from Stuttgart Irrigated and Kibler Irrigated.

<sup>5</sup>Average yields from Keiser Irrigated, Keiser Non-Irrigated, Keiser Double-Crop Irrigated and Rohwer Irrigated.
