# ARKANSAS CORN AND GRAIN SORGHUM PERFORMANCE TESTS<sup>1</sup>

## 2012

R.D. Bond<sup>2</sup>, D.G. Dombek<sup>3</sup>, and J.A. Still<sup>4</sup>, and R.M. Pryor<sup>5</sup>

### INTRODUCTION

Corn and grain sorghum performance tests are conducted each year in Arkansas by the University of Arkansas System Division of Agriculture. The tests provide information to companies marketing seed within the state and aid the Arkansas Cooperative Extension Service in formulating recommendations for producers.

The 2012 corn performance tests contained 94 entries and were conducted at the Northeast Research and Extension Center (NEREC) at Keiser, the Lon Mann Cotton Research Station (LM-CRS) near Marianna, the Bell Farming Company near Des Arc, the Southeast Research and Extension Center–Rohwer Division (SEREC-RD) near Rohwer, and the Rice Research and Extension Center (RREC) near Stuttgart. The 2012 grain sorghum performance tests contained 21 entries and were conducted at the NEREC, the LMCRS, the SEREC-RD, and the RREC. Test location maps for grain sorghum and corn can be found on page 36 and inside the back cover, respectively.

### MATERIALS AND METHODS

Corn hybrids were divided into two maturity groups. Based on information provided by the originating companies, entries were placed into a 116 or fewer days-to-maturity group (Early- to Mid-Season) or 117+ group (Mid- to Full-Season).

Within each test, entries were arranged as a randomized complete block design with four replications. Plots were two rows wide and 20–25 feet long depending on location. Seeding rates for each corn and grain sorghum hybrid were based on the recommendations of the originating company. All plots were harvested with a plot combine. Specific location and management practice information accompany each table.

### GRAIN SORGHUM PERFORMANCE MEASUREMENTS

**Yield:** Yields were calculated from the weight of threshed grain from each plot and are expressed as bushels per acre (bu./A) at 14% moisture.

**Grain Moisture:** Expressed as a percent moisture of grain at harvest.

**Plant Height:** Average height in inches from the soil surface to the top of the grain head.

**Head Exertion:** Average distance in inches from the flag leaf to base of panicle.

**Head Compactness Scale:**

1 = Head short and oval. Rachis branches intermediate in length.

2 = Head long and slender. Rachis branches strong and short.

3 = Head elongated and oval. Rachis branches beginning to weaken and intermediate in length.

4 = Head elongated and rectangular in shape. Rachis branches intermediate in strength and length.

5 = Head open and elongated. Rachis branches weak.

**Bird Damage:** A visual estimate of total percent grain loss from each plot.

# Arkansas Corn and Grain Sorghum Performance Tests 2012

## CORN PERFORMANCE MEASUREMENTS

**Yield:** Yields were calculated from the weight of shelled corn harvested from each plot and are expressed as bushels per acre (bu./A) at 15.5% moisture.

**Grain Moisture:** Expressed as a percent moisture of shelled grain at harvest.

**Root Lodging:** Average number of plants leaning more than 40 degrees from vertical at harvest.

**Stalk Lodging:** Average number of plants broken below an ear at harvest.

---

**Plants/Acre:** The plant population expressed in the number of plants per acre.

**Ear Height:** The average distance in inches from the soil surface to the point of attachment of upper ear.

**Tip Cover:** Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when the husks reached well beyond the end of the ear and fit tightly. A rating of average was given when the husks reached the tip of the ear or fit loosely. A rating of poor was given when the ears were open to the weather.

## Variety Testing Website

This report and other information about variety testing for cotton, rice, small grains and soybean can be found at **[ArkansasVarietyTesting.com](http://ArkansasVarietyTesting.com)**. Disease ratings that do not appear in this or other reports may also be found on this Website.

<sup>1</sup> Average yield for 2011 and 2012.

<sup>2</sup> Average yield for 2010, 2011, and 2012.

<sup>3</sup> Average number of plants per hybrid.

<sup>4</sup> Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when husks reached well beyond the end of the ear and fitted tightly. A rating of average was given when the husks reached the tip of the ear or fitted loosely.

A rating of poor was given when ears were open to the weather.

Soil Series	Crowley silt loam
Soil pH	6.8

<sup>1</sup> Average yield for 2011 and 2012.

<sup>2</sup> Average yield for 2010, 2011, and 2012.

<sup>3</sup> Average number of plants per hybrid.

<sup>4</sup> Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when husks reached well beyond the end of the ear and fitted tightly. A rating of average was given when the husks reached the tip of the ear or fitted loosely.

A rating of poor was given when ears were open to the weather.

Soil Series	Calhoun silt loam
Soil pH	N/A
Previous Crop	Soybean
Row Width	30"
Preplant Herbicide	N/A
Preplant Fertilizer	1.5 tons/A chicken litter with analysis of N-55, P-63, K-59; 225 lb/A ammonium sulfate, 60 lb/A urea, 85 lb/A potash
Planting Date	April 5
Sidedress Fertilizer	20 gal/A 32%N, May 3; 100 lb/A urea, May 21
Herbicide Application(s)	3 qt/A Lexar + 1 qt/A Atrazine, April 19
Insecticide Application(s)	N/A
Fungicide Application(s)	14 oz/A Quilt, July 16
Harvest Date	Early hybrids, August 15; Late hybrids, August 15
