ACKNOWLEDGMENTS

This research was funded in part by participating companies.
The assistance of the following individuals in conducting these experiments is gratefully acknowledged:

Department of Plant Pathology, University of Arkansas, Fayetteville
Dr. David TeBeest, Professor

Northeast Research and Extension Center, Keiser
Dr. Fred Bourland, Center Director
Mr. Mike Duren, Research Specialist

Cotton Branch Station, Marianna
Mr. Claude Kennedy, Resident Director
Mr. Dale Yadon, Research Specialist

Pine Tree Branch Station, Pine Tree
Mr. Roger Eason, Resident Director
Mr. Shawn Clark, Research Specialist

Rice Research and Extension Center, Stuttgart
Dr. Chris Deren, Center Director
Mr. Jamie Branson, Research Specialist

Southeast Research and Extension Center, Monticello
Dr. Edwin A. Colburn, Center Director
Mr. Larry Earnest, Superintendent, Rohwer Division
Mr. Randy Cingolani, Research Specialist, Rohwer Division

Southwest Research and Extension Center, Hope
Dr. Mike Phillips, Center Director
Dr. T. L. Kirkpatrick, Professor
Mr. J. D. Barham, Research Specialist

Vegetable Substation, Kibler
Mr. Dennis Motes, Resident Director
Mr. Steve Eaton, Research Associate

Special thanks to Mr. Davis Bell and to Mr. John Williams for allowing us to conduct corn performance tests on their farms

TECHNICAL ADVISORY COMMITTEE

Dr. Chris Tingle

ARKANSAS CORN AND GRAIN SORGHUM PERFORMANCE TESTS⁴ 2003

D.G. Dombek, D.K. Ahrent, R.D. Bond, and I.L. Eldridge

INTRODUCTION

Corn and grain sorghum performance tests are conducted each year in Arkansas by the University of Arkansas Division of Agriculture. The tests provide information to companies marketing seed within the state, and aid the Arkansas Cooperative Extension Service in formulating recommendations for producers.

The 2003 corn performance tests contained 93 entries and were conducted at the Northeast Research and Extension Center (NEREC) at Keiser, the Cotton Branch Station (CBS) near Marianna, the Bell Farming Company (BFC) near Des Arc, the Southeast Research and Extension Center - Rohwer Division (SEREC-RD) near Rohwer, and the John Williams Farm (JWF) in Lafayette county. The 2003 grain sorghum performance tests contained 42 entries and were conducted at the NEREC near Keiser, the CBS near Marianna, the Pine Tree Experiment Station (PTS) near Pine Tree, the SEREC-RD near Rohwer, the Rice Research and Extension Center (RREC) near Stuttgart, and the Vegetable Substation (VSS) near Kibler. Test location maps for grain sorghum and corn can be found inside the back cover.

MATERIALS AND METHODS

Corn hybrids were divided into two broad maturity groups. Based on information provided by the originating companies, entries were placed into an early- to mid-season group or a mid- to full-season group.

Within each test, entries were arranged as a randomized complete block design with four replications. Plots were two or three rows wide and end-trimmed to a uniform length of 20-25 feet depending on location. Seeding rates for each corn and grain sorghum hybrid were based on the recommendations of the originating company.

All plots were harvested with a plot combine. Specific location and management practice information accompanies each table.

GRAIN SORGHUM PERFORMANCE MEASUREMENTS

Yield: Yields were calculated from the weight of threshed grain from each plot and are expressed as pounds per acre (lbs./A) at 14% moisture.

Grain Moisture: Expressed as a percent moisture of grain at harvest.

Plant Height: Average height in inches from the soil surface to the top of the grain head.

Head Exertion: Average distance in inches from the flag leaf to base of panicle.

Head Compactness Scale:

1 = Head short and oval. Rachis branches intermediate in length.

2 = Head long and slender. Rachis branches strong and short.

3 = Head elongated and oval. Rachis branches beginning to weaken and intermediate in length.

4 = Head elongated and rectangular in shape. Rachis branches intermediate in strength and length.

5 = Head open and elongated. Rachis branches weak.

Test Weight: Test weights, where reported, are expressed in pounds per bushel (lbs./bu), and were determined using subsamples from each plot.

Bird Damage: A visual estimate of total percent grain loss from each plot.

⁴Use of products and trade names in this report does not constitute a guarantee or warranty of the products named and does not signify that those products are approved to the exclusion of comparable products.

CORN PERFORMANCE MEASUREMENTS

Yield: Yields were calculated from the weight of shelled corn harvested from each plot and are expressed as bushels per acre (bu/A) at 15.5% moisture.

Grain Moisture: Expressed as a percent moisture of shelled grain at harvest.

Root Lodging: Plants leaning more than 40 degrees from vertical at harvest were classed as root lodged.

Stalk Lodging: Plants broken below an ear were classed as stalk lodged.

Plants/Acre: The plant population count, expressed in the number of plants per acre.

Ear Height: The average distance in inches from the soil surface to the point of attachment of the upper ear.

Test Weight: Test weights, expressed in pounds per bushel (lbs./bu), were determined using subsamples from each plot.

Tip Cover: Tip cover was rated as good (1), average (2), or poor (3). A rating of good was given when the husks reached well beyond the end of the ear and fitted tightly. A rating of average was given when the husks reached the tip of the ear or fitted loosely. A rating of poor was given when the ears were open to the weather.

Rohwer Nonirr. = Southeast Research and Extension Center - Rohwer Division.

Kibler Irr. = Vegetable Substation.

² High wind prior to harvest caused extensive lodging at Marianna. The test was harvested, but the results will not be reported.

³ There was extensive bird and midge damage in the Pine Tree test. Results will not be reported.

⁴ Bird damage in this test was greater than the bird damage in the nonirrigated test at this location.
