ATTITUDE CHANGES TOWARD MENTAL HEALTH AS RELATED TO A COLLEGE COURSE IN ABNORMAL PSYCHOLOGY

E. Philip Trapp University of Arkansas

This paper is the result of a short and superficial excursion into the field of attitude measurement. Ever since the writer began teaching courses in abnormal psychology, he has been interested in the general effectiveness of such courses for the promotion of mental health. One important facet of this question is the role that abnormal psychology might play in correcting faulty attitudes toward mental illness. When Woodward(1) published a mental health questionnaire developed by the Roper Agency in their study on mental health attitudes in Louisville, the writer saw a convenient tool for exploring this phase of the problem. However, since there has been no published data on the discriminative velue of the Roper questionnaire on a college population, it seemed best to begin cautiously and refrain from any sort of an elaborate experimental design. Thus, the initial step was essentially a pilot study to investigate a potential lead and pave the way for a more rigorous analysis of the problem. The findings presented here, then, should be considered solely as suggestive and not definitive.

SUBJECTS

The subjects for this pilot study were 53 upperdivision college students, both men and women, enrolled in a class of abnormal psychology at the University of Arkansas. This course, which had general psychology as its only prerequisite, was strictly service-oriented; that is, primarily designed for non-majors in psychology. The composition of the class was a fairly good cross-section of upper-classmen on the campus.

PROCE DURE

30

At the beginning of the course, the Roper ques-

tionnaire was presented to the subjects in a single group session. The entire questionnaire consisted of 9 questions and is reproduced in the appendix. At the end of the course, the questionnaire was presented again to the subjects in a single group session. Approximately 20 minutes was needed to fill out the questionnaire on each presentation.

RESULTS

A crude scoring scheme was devised for evaluating the questionnaires. The correct response to each question was worth four points; all other responses were scored 0. The correct or preferable response for each question was determined by unanimous agreement among three judges, selected from the staff of the Psychology Department at the University of Arkansas. In Question 9, since the subject was asked to make four choices, each correct choice was assigned a scoring value of 1.

Not all of the questions on the test were tabulated in the results. The judges felt that Question lwas primarily an information question, which reflected more of the student's knowledge of the course than his attitudes. Questions 3, 7, and 8 were eliminated because of some disagreement among the judges in evaluating them. It became apparent that the same response to these items could very readily reflect wide diversity of attitudes - some positive in character and others negative. Hence, the questions that were ultimately used in the test were Questions 2, 4, 5, 6, and 9. The Correct responses for each of these questions were as follows:

```
Question 2 - Hospital
Question 4 - Choice "e"
Question 5 - Choice "e"
Question 6 - Choice "b"
Question 9 - Choices "b," "d," "f," "g,"
"i." "m."
```

The maximum total score was 20. This score would be interpreted to mean that the student's responses reflected the best possible attitude toward mental health. Table 1 presents each subject's scores on the questionnaire on both his initial performance and his retest performance.

https://scholarworks.uark.edu/jaas/vol10/iss1/8

ARKANSAS ACADEMY OF SCIENCE

A t-test was run between the means of the two performances and a t-value of 3.82 was obtained. This was significant at beyond the 1 per cent level of confidence. "t" was obtained by the formula

("t" for correlated pairs of measures)

DISCUSSION

In addition to the evaluation of the group differences in performance, some analysis of individual scores was undertaken to provide more complete picture. One such treatment involved dividing the scores on the group's first performance into two categories representing good and poor performance. With 16 total points as a cutting score, it was found that 16 of the 53 subjects scored 16 or higher and the remaining 37 scored less than 16 total points. The mean score of the poor group was 9.73 on the first performance; on the second performance, their mean score jumped to 14.14. This very dramatic shift was significant at well beyond the 1 per cent level of confidence.

An examination of individual records showed that 32 of the subjects in the poor group received higher scores on their second performance, three subjects retained their same score, and two subjects obtained lower scores.

The findings in this preliminary report were most encouraging in suggesting the part that a course in abnormal psychology might play in the modification of attitudes toward mental health. Many factors were not controlled, so the results cannot be unequivocally interpreted, but the original purpose was achieved in providing evidence for a promising lead to a more fruitful study.

ATTITUDE CHANGES TOWARD MENTAL HEALTH

ARKANSAS ACADEMY OF SCIENCE

APPE NDIX

ROPER QUESTIONNAIRE ON MENTAL HEALTH

1. There are all sorts of opinions about mental illness and what causes it. Below are three such opinions. Indicate whether you think they are more true than false, or more false than true.

		True	False	Know
(a)	Most mental illness is inherited			
(ъ)	Most hospitals for the mentally ill treat their	1		
(c)	patients very badly There are not enough doctors and hospitals in			
	Arkansas to give proper care and treatment to			
	all people in Arkansas who are mentally ill to-		3 A	
	day			

2. Which do you think is the best thing to do with sex criminals, send them to a hospital or to a jail? Hospital _____ Jail ____ Other ____ Don't know _____.

3. Suppose that a member of your family became mentally ill. Do you think that you would tell your friends and acquaintances about it, just as if he had heart trouble or asthma, or would you try to keep it as quiet as possible? Tell it to friends Keep quiet Don't know

4. Mrs. B. had always beena little suspicious and inclined to take the worst view of things, but she had led a fairly happy married life until she began to accuse her husband of not loving her any more. When she saw him speak politely to an attractive widow next door, Mrs. B. waited until he had left, got hold of his gun and then went over and threatened to kill the widow. Mrs. B.'s husband hadn't done any thing wrong and doesn't know what

to do about her. Here are some things various people have suggested might be done with Mrs. B. If only	
one thing on the list could be done, which one do	
you think it would be best to do? (Check one)	
you think it would be best to do. (oneck one,	
(a) Her minister or priest should be	
called in to talk with her	
(b) The husband should give her a good	
talking to and then wait to see if	
her jealousy won't blow over	
(c) The family doctor should be called to	
see if he can't give her something to	
calm her nerves	
(d) The husband should stay home with his	
wife to prove that he really loves	
her	
(e) She should be taken to a mental hos-	
pital where she can be treated and	
where she can't harm anyone	į.
(f) The police should be called immedi-	
ately to lock up Mrs. B. until she	
calms down	
(g) I don't know what should be done	

5. Mr. G. is a 52 year-old machinist who has always been a hard worker and who has worried a lot about making both ends meet for his large family. One day his job at the plant was given to someone else, and he was told by him employer that he was no longer needed. After this had happened he became very depressed, accused himself of being a complete failure, and worthless to his family. He refused to look for another job or take an interest in anything and finally tried to commit suicide. Here are some things that various people have suggested might be done about Mr. G. If only one thing on the list could be done, which do you think it would be best to do? (Check one)

- (b) He should go to his family doctor to find out if there is a physical illness that is making him feel badly ...
- (c) He should have a good long rest away from his family responsibilities and worries
